ADDESSA Corp — HRIS

Payroll & Time Keeping

Column Reference — what each column on the list and record views means and how it is computed

Item	Detail
Document version	1.3 — 10/15/2026 (BIR semi-monthly / annual tables, centavo rules, over-break late, deductions Paid / Deducting / cash payments, allowance description)
Applies to	HRIS web application (React front end + vueportal API): Time & Leave, Payroll, My Workspace
Intended readers	HR / Payroll officers, payroll approvers, QA testers, system administrator
Companion to	Payroll Process — End-to-End Testing Manual (test-scenarios/payroll-process-testing-manual.docx)
Source	Read from the application code (computation services and pages) on 10/11/2026, updated 10/15/2026. Peso examples are illustrative unless stated.

1. How to Read This Document

The document is grouped the way the menu is: section → page (menu item) → view (list, record view, report). Each page has a table with three columns:

- Column — the heading exactly as it appears on the screen.
- What it means — what the value tells you, in plain words.
- How it's computed — where the value comes from, or the formula the system uses.

Pages that only show saved fields (codes, names, remarks, actions) list only the columns that need an explanation.

1.1 Terms used in the formulas

Term	Meaning
Daily rate	Monthly-paid: monthly rate × 12 ÷ working days a year (Payroll Settings → Working days a year, now 313). Daily-paid: the daily rate on Salary History.
Hourly rate	Daily rate ÷ hours per day (Payroll Settings, now 8).
Cut-off share	A monthly amount is split over the cut-offs of the month: ÷ 2 for a semi-monthly payroll. "1 of 2" / "2 of 2" is the cut-off's order by its end date.
Approved payrolls only	Every report (Pay Sheet, Contribution History, Remittances, Year-end Tax, 13th Month, My Payslips) reads only approved payslips. Draft, Pending and Cancelled runs are not counted.
EE / ER / EC	EE = employee share (deducted from pay). ER = employer share (paid by the company). EC = SSS Employees' Compensation, employer-paid.
MSC / base	The amount a contribution is computed on: SSS Monthly Salary Credit (from the bracket), PhilHealth basic salary (between the floor and ceiling), Pag-IBIG compensation (up to the maximum fund salary).
Taxable pay	Earnings marked taxable on the payslip: basic pay, absences / late / undertime (negative), holiday pay, overtime, night differential, taxable allowances and taxable adjustments.
Premium rates	Payroll Settings → Premium Rates: per day type, the % paid for a regular hour, an overtime hour, the night differential added on top, and the % of the daily rate paid for an unworked holiday.
Day type	Ordinary Day, Rest Day, Special Holiday, Regular Holiday, Double Holiday, and each "on Rest Day". Taken from the schedule (day off) and the Holiday Calendar for the employee's branch.

2. Time & Leave

2.1 Leave Applications

Menu: Time & Leave → Leave → Leave Applications **View:** List

Column	What it means	How it's computed
Employee	Who the leave is for	Employee code, name and branch.
Leave Type	Kind of leave (VL, SL, SIL, Maternity …)	From Leave Types. Shows "x unpaid" when the balance did not cover every day.
Dates	First and last day of the leave	Date from – date to; AM / PM for a half day.
Days	Leave days charged	Each date in the range, skipping the employee's day off (schedule in force that day) and holidays of their branch — unless the type counts calendar days (Maternity). A half day = 0.5. No schedule = no day skipped.
Status	Where the filing is	Pending (at an approval level) → Approved / Disapproved; Pending or Approved → Cancelled (days return to the balance).
Filed By	User who filed it	Recorded when the leave is saved.

2.2 Leave Balances

Menu: Time & Leave → Leave → Leave Balances **View:** Per employee, per year

Column	What it means	How it's computed
Credits	Days the employee may use this year	The employee's own credit row (Edit Credits) if set, else the leave type's Yearly Credits. Blank = the type has no yearly limit.
Used	Paid days already taken	Sum of Approved leave days of that type in the year (date from in the year), less their unpaid days.
Pending	Paid days waiting for approval	Sum of Pending leave days of that type (reserved, so they can't be used twice).
Balance	Days still available	Credits − Used − Pending.
Applies	Whether the type applies to this employee	"Eligible", or the reason it doesn't: inactive type, gender, employment type, or months of service (from date employed) below the minimum.

Note: No credit = unpaid: a leave longer than the balance is not refused. The days beyond the balance are stored as unpaid (the last days of the leave) and deducted on the payroll.

2.3 Manual Time Entries

Menu: Time & Leave → Attendance → Manual Time Entries **View:** List and details

Column	What it means	How it's computed
Date	The work day being corrected	The date filed.
Time	Time in / break out / break in / time out filed	As typed. A time out earlier than the time in = the next day (night shift).
Type	What the entry is for	E.g. field work, forgot to punch, biometric error.
Status	Where the filing is	Pending → Approved / Disapproved, or Cancelled. Only Approved entries are used by Timekeeping and payroll.
Biometric / Filed (details)	Punches on record vs. the times filed	Biometric = the first IN, break, and last OUT read from BioBridge for that date; Filed = the entry. An approved entry replaces the time in / out it gives.

2.4 Overtime

Menu: Time & Leave → Attendance → Overtime **View:** List and details

Column	What it means	How it's computed
Date	Day the overtime was worked	Filed before or after the day.
Time	Overtime start and end	An end before the start = the next day.
Hours	Overtime hours	(End − start) − unpaid break, in hours.
Day	Day type of that date	From the schedule and Holiday Calendar on that date (Ordinary Day, Rest Day, Special / Regular / Double Holiday …). Payroll uses the day type of the date again when it runs.
Status	Where the filing is	Pending → Approved / Disapproved, or Cancelled. Only Approved overtime is paid.

2.5 Shifts, Shifting and Default Schedules

Menu: Time & Leave → Setup → Shifts; Schedule → Shifting / Default Schedules **View:** Lists

Column	What it means	How it's computed
Weekly Pattern (Shifts)	The shift's seven days	Each day: day off, or time in – time out with break minutes. Hours per day = span − break.
Grace (Shifts)	Minutes allowed before a time in counts as late	If the time in is after scheduled in + grace, late is counted from the scheduled time in (the grace is not subtracted).
Period / Relieving (Shifting)	A temporary shift for a date range	Overrides the Work Schedule on those dates; "Relieving" names the employee being covered.

Column	What it means	How it's computed
Group / Type (Default Schedules)	A default shift for a company, branch or position	Used only when the employee has no shifting and no Work Schedule. Most specific wins: employee shifting → employee Work Schedule → position → branch → company → No Schedule.

2.6 Payroll Cut-offs and Holiday Calendar

Menu: Time & Leave → Setup **View:** Lists

Column	What it means	How it's computed
Period (Cut-offs)	Dates the cut-off covers	From Payroll Settings → Cut-offs & Pay Days (e.g. 1–15 and 16–end of month).
Pay Date (Cut-offs)	When the cut-off is paid	The pay day of the cut-off (0 = last day of the month); a Sunday / holiday moves to the previous or next working day per Payroll Settings.
Filing (Cut-offs)	Whether leave / time entries / overtime can still be filed for its dates	Open / Closed. Approving the payroll closes it.
Type (Holidays)	Regular, Special (non-working), Special Working, Local	A Special Working day is a normal work day. Regular and Special holidays are never absences.
Branches (Holidays)	Where the holiday is observed	All branches, or the branches listed (local holidays).

3. Payroll → Processing

3.1 Timekeeping — employee list

Menu: Payroll → Processing → Timekeeping **View:** List (one row per employee for the cut-off)

Computed live from the schedule, biometric punches, imported attendance logs, approved manual time entries, approved leave and overtime, and holidays. The payroll run copies these figures when it is generated.

Column	What it means	How it's computed
Present	Days worked	Count of days with status Present, Half-day Leave or Incomplete.
Absent	Days absent	Sum of absent days: a scheduled work day with no punches and no leave = 1; a half-day leave with no punch for the other half = 0.5. A holiday is never an absence.
Leave	Leave days in the cut-off	Paid leave days + unpaid leave days.
Late	Total late	Sum of late minutes (see the day view).
Undertime	Total undertime	Sum of undertime minutes.
Overtime	Total approved overtime	Sum of approved overtime minutes.
Holidays	Holidays in the cut-off	Count of days with status Holiday, Holiday Worked or Holiday Worked (day off).
Needs a Look	Days HR should check	Count of days with status Incomplete, No Schedule, Rest Day Worked or Holiday Worked (day off).

3.2 Timekeeping — day view (DTR)

Menu: Timekeeping → View (also on a payslip) **View:** Record view (one row per day)

Column	What it means	How it's computed
Schedule	Scheduled time in / out that day	The schedule in force: shifting, Work Schedule, or a default schedule (the source is shown).
Day Type	Kind of day	See Day type in section 1.
In / Out	Time in and time out used	The first IN and last OUT inside the day's window (from 4 hours before the scheduled in). The icon shows the source: biometric device, Attendance Logs import (replaces that date's biometric punches), or an approved manual time entry. The punches between them are the break: Brk = the last OUT – the first IN among them, shown under In.
Status	What the day counts as	Present, Absent, On Leave, Half-day Leave, Incomplete (one punch only — flagged, not deducted), Holiday, Holiday Worked, Rest Day, Rest Day Worked (paid only through approved overtime), No Schedule (flagged, nothing deducted), Upcoming (today or later — assumed worked).

Column	What it means	How it's computed
Worked	Minutes worked	Scheduled minutes (span − break) − late − undertime. On a holiday: time worked inside the schedule, less the break. Upcoming / Incomplete: the scheduled minutes.
Late	Minutes late	If the time in is after scheduled in + grace: time in − scheduled in; plus over-break — a break (Brk) longer than the shift's break, counted only when both break out and break in are punched ("over-break N min"; Payroll Settings → Late turns it off). At most the scheduled minutes.
Undertime	Minutes left early	Scheduled out − time out, when the time out is earlier.
Absent	Absence charged that day	1, 0.5 (half day) or blank.
Night	Regular minutes in the night window	Minutes worked inside the night-differential window (Payroll Settings, now 22:00–06:00), not counting the break.
Overtime	Approved overtime that day	Minutes of the approved filings, and the part inside the night window.
Remarks	Why the day has its status	E.g. "Missing time out — file a manual time entry", the leave type, the holiday name.

3.3 Payroll Runs — list

Menu: Payroll → Processing → Payroll Runs **View:** List (one row per cut-off)

Column	What it means	How it's computed
Cut-off	The period paid	Code and dates of the cut-off.
Company	Whose employees the run pays	All companies, or one company (each employee's branch's company when generated). A cut-off has one all-companies run or one run per company, never both.
Pay Date	When it is paid	The cut-off's pay date.
Status	Where the run is	Draft (can be generated again) → Pending (waiting for the approvers) → Approved (locked); a Draft can be Cancelled. An Approved run can be rolled back to Draft (all or selected employees) only before its pay date — from the pay date it counts as paid and is corrected by a payroll adjustment instead.
Employees	People in the run	Number of payslips, across every approval round.
Gross	Total earnings	Sum of every payslip's gross pay.
Deductions	Total deductions	Sum of every payslip's total deductions.
Net Pay	Total take-home pay	Gross − Deductions (sum of every payslip's net pay).
Paid From	Company accounts that paid it	From the approved payslips' saved accounts: each paying account (its company, or General) with its employee count; "on approval" until approved.
Last Generated	When and by whom it was last computed	Set each time Generate runs.

3.4 Payroll Run — pay register

Menu: Payroll Runs → View **View:** Record view (one row per employee)

Column	What it means	How it's computed
Rate	Pay basis and rate at the end of the cut-off	From Salary History on the cut-off's last day: "₱28,000.00 / month" or "₱695.00 / day".
Absent	Days absent	From the DTR copied onto the run.
Late / UT	Late + undertime	Late minutes + undertime minutes, shown as hours and minutes.
OT	Approved overtime	Overtime minutes from the DTR.
Gross	Total earnings	Sum of the payslip's earning lines (section 3.5).
Deductions	Total deductions	Government contributions + withholding tax + loans and scheduled deductions.
Net Pay	Take-home pay	Gross − Deductions.
Check	Warnings to review before approval	Number of warnings: e.g. rest day worked without approved overtime (not paid), missing time in / out, no Work Schedule, a deduction not taken because net pay would go below zero, no contribution / tax table in force.
Approved / Approved · R1 (tag)	Payslip already approved and locked	Shown on a Draft or Pending run: approved in round 1 (2 …). It isn't computed again until it is rolled back.
R2 (tag)	Approval round of the payslip	Shown when the run has more than one round.
Added (tag)	Employee added after the run was approved	Computed when added; approved with the next round.
Approval Rounds: Round	Each approval of the run	Round 1 is the first approval; employees added to an approved run are approved as round 2, 3 … Earlier rounds are never recomputed. "Not approved yet" = added employees waiting for approval.
Approval Rounds: Employees / Gross / Net Pay	What the round covers	Count and sums of the payslips approved in that round ("0 — rolled back" when they were all rolled back).
Approval Rounds: Submitted / Approved	Who sent and approved that round, and when	Kept with the round when it was approved.

Note: Adding employees (only before the pay date): Generate on an approved cut-off (or Add Employees on the run) lists only employees not in it. They are computed now, the run goes back to Draft, and the final approval releases only them as the next round. Remove Selected takes not-yet-approved payslips out of a Draft. The round filter also sets which payslips the Payroll Register and Bank File cover. The Payroll Register Excel also lists each employee's Credited To (their account) and Paid From (the company account).

3.5 Payslip lines

Menu: Payroll Run → payslip; My Payslips **View:** Record view (one employee)

Each line shows how it was computed underneath it. Amounts are summed at full precision and each line is rounded once.

Column	What it means	How it's computed
Basic Pay (monthly-paid)	The cut-off's share of the monthly salary	Monthly rate ÷ cut-offs in the month. If the rate changes inside the cut-off, each rate × its days ÷ the cut-off's days.
Basic Pay (daily-paid)	Pay for hours worked	Worked minutes ÷ 60 × hourly rate, for each worked day.
Absences	Deduction for days absent (monthly-paid)	− absent days × daily rate.
Unpaid Leave	Deduction for leave without credits	− unpaid leave days × daily rate.
Late / Undertime	Deduction for time not worked	− minutes ÷ 60 × hourly rate. The late line names each day, e.g. "09/15 6 min (over-break 6)".
Paid Leave (daily-paid)	Leave paid from credits	Paid leave days × daily rate. (Monthly-paid: already inside Basic Pay.)
Holiday Premium (monthly-paid)	Extra pay for working a holiday	Hours worked × hourly rate × (holiday regular rate − 100%). E.g. a Regular Holiday at 200% adds 100%.
Holiday Pay — worked (daily-paid)	Pay for working a holiday	Hours worked × hourly rate × the holiday's regular rate.
Holiday Pay — not worked (daily-paid)	Pay for an unworked holiday	Daily rate × "Paid if Unworked" % (Regular Holiday 100%, Double 200%, Special 0%), if eligible (prior-day rule when switched on).
Night Differential	Extra pay for night hours	Night hours × hourly rate × the hour's rate (holiday rate if worked on a holiday, else 100%) × night-diff % (10%). Night overtime hours use the overtime rate instead.
Overtime	Approved overtime pay	Hours × hourly rate × the day type's overtime rate (Ordinary 125%, Rest Day 169% …). On a day off, the first 8 hours are at the day type's regular rate (e.g. Rest Day 130%), the rest at its overtime rate.
Allowance lines	Allowances in force during the cut-off	Per cut-off: amount. Per month: amount ÷ cut-offs in the month. Per week: amount × 52 ÷ 12 ÷ cut-offs. Per day worked: amount × days worked. Each × (days covered ÷ cut-off days) when the allowance starts or ends inside the cut-off. De minimis over its monthly limit: the excess is a separate taxable line. A needs-description type is labelled with it: "Other Allowance — Project incentive".
Payroll adjustment lines	Open payroll adjustments of the cut-off	The adjustment amount, labelled with its type (or what an Other Adjustment is for, e.g. Holiday Pay (manual)); a Deduction one is negative. Taxable per the adjustment.
Gross Pay	Total earnings	Sum of all lines above (deductions from basic are negative).

Column	What it means	How it's computed
SSS / PhilHealth / Pag-IBIG	Employee share of contributions	The monthly EE amount (section 7.2) taken on the cut-off set in Payroll Settings: every cut-off = split across the month's cut-offs (the earlier ones take the rounded share, the last the rest, so the month adds up: 333.49 → 166.75 + 166.74); 1st or 2nd cut-off = the whole month on that cut-off. Centavos per Payroll Settings: Rounded, or Employee share cut — employer pays the rest (PhilHealth default: 333.4855 → EE 333.48, ER 333.49).
Pag-IBIG (voluntary)	Extra Pag-IBIG the employee chose	The profile's voluntary top-up, on the Pag-IBIG schedule.
Withholding Tax	Income tax withheld	On taxable pay less the mandatory EE contributions (never net pay or loans). Every cut-off (semi-monthly): BIR semi-monthly table on this cut-off's taxable pay − the EE contributions deducted on it ("Semi-monthly table on …"). 1st cut-off only: monthly table on taxable pay × 2 − the month's EE contributions (an estimate). 2nd cut-off only: monthly table on (this + earlier cut-off's taxable pay − the month's EE contributions) − tax already withheld this month. Table in force on the cut-off's end; Tax centavos Rounded or Cut. Minimum wage earner / Exempt = 0; Fixed = the profile's monthly amount (÷ 2 on a semi-monthly cut-off).
Loans & Deductions	Scheduled deductions due	Each Active deduction started on or before the cut-off and scheduled on it: min(amount per cut-off − cash paid for this cut-off, balance). Cash (manual) payments tagged to the cut-off count toward it: covering the amount, not taken; less, only the rest is taken, with a warning and "Scheduled … − … paid in cash". Skipped (with a warning) if it would make net pay negative. Labelled "Type — description" for a needs-description type.
Employer share	What the company pays on top	ER + EC of each agency on the same schedule. Not deducted from the employee. Shown on the employee's own payslip (My Payslips, printed payslips, their pay sheet) only when Payroll Settings → Payslip turns it on; payroll staff always see it.
Net Pay	Take-home pay	Gross Pay − all deductions.

Worked example — monthly-paid, 2nd cut-off (figures are illustrative)

- Rate ₱26,000 / month → daily 26,000 × 12 ÷ 313 = ₱996.81 → hourly ₱124.60.
- Basic Pay 26,000 ÷ 2 = ₱13,000.00. One absence − ₱996.81. 45 min late − 0.75 × 124.60 = − ₱93.45.
- 2 h overtime on an ordinary day: 2 × 124.60 × 125% = ₱311.50. Rice ₱2,000 / month ÷ 2 = ₱1,000.00 (non-taxable).
- Gross = 13,000 − 996.81 − 93.45 + 311.50 + 1,000 = ₱13,221.24.
- Contributions on the 2nd cut-off (whole month): e.g. SSS ₱1,300.00, PhilHealth ₱650.00, Pag-IBIG ₱200.00.
- Tax every cut-off: this cut-off's taxable pay 12,221.24 − the contributions deducted on it 2,150 = 10,071.24 → BIR semi-monthly table → ₱0.00 (not over 10,417).
- Net = Gross − contributions − tax − loans due.

3.6 Bank File

Menu: Payroll Run / 13th Month → Bank File **View:** Preview and CSV

Column	What it means	How it's computed
Employee	Who is paid	Employees with net pay above zero.
Bank / Account No. / Account Name	Where the pay goes	The employee's bank account in force on the pay date (Payroll → Bank Accounts).
Amount	Amount credited	The payslip's net pay (13th month: the 13th-month amount).
Paying account (group)	Company account the money comes from	The employee's company's own account (Payroll Settings → Employers): the one at the employee's bank when "match employee bank" is on, else the company's default for the pay date (a default period covering it, else its Default). A company with no account, or none marked Default, uses the general accounts the same way. Kept when the run is approved — and on each payslip; each approval round keeps its own.
Round (filter)	Which payslips the file covers	All, or one approval round. A round's CSV can be downloaded as soon as that round is approved, even while employees added later wait for approval.

4. Payroll → Payroll Reports

4.1 Pay Sheet

Menu: Payroll → Payroll Reports → Pay Sheet **View:** Report (tabs: By Employee, Company, Branch, Position, Cut-off)

Approved payslips whose cut-off ends inside the date / cut-off range, added up per employee (one line however many cut-offs). The group tabs subtotal the same lines by the payslip's company (its employer when generated) and the employee's current branch or position, or by cut-off.

Column	What it means	How it's computed
Rate	Pay basis and rate	From the latest cut-off in the range.
Cut-offs	Payslips added up	Number of approved cut-offs for the employee in the range.
Basic Pay	Basic salary earned	Sum of Basic Pay lines.
Absences / Late / UT	Deductions from basic	Sum of absences, unpaid leave, late and undertime lines (negative).
Paid Leave	Leave pay (daily-paid)	Sum of Paid Leave lines.
Holiday Pay	Holiday pay and premiums	Holiday premium + holiday pay worked + not worked.
Overtime / Night Diff.	Overtime and night differential	Sum of those lines.
Allowances (taxable / non-taxable)	Allowances split by tax treatment	Allowance lines marked taxable vs. not.
Adjustments	Payroll adjustments	Every other earning line (payroll adjustments).
Gross Pay	Total earnings	Sum of payslip gross pay.
SSS / PhilHealth / Pag-IBIG / Pag-IBIG (vol.)	Employee contributions	Sum of each deduction line.
Withholding Tax	Tax withheld	Sum of tax lines.
Loans & Deductions / Other Deductions	Scheduled deductions	Loans & Deductions category vs. anything else.
Total Deductions / Net Pay	Totals	Sum of payslip totals; Net = Gross − Total Deductions.
Employer Share (SSS ER, SSS EC, PhilHealth ER, Pag-IBIG ER, Total)	Company contributions	Sum of the employer lines.
Employees (group tabs)	People in the group	Number of employee lines in the subtotal.

4.2 Contribution History

Menu: Payroll → Payroll Reports → Contribution History (also Contributions → History) **View:** Report (one row per employee, expandable per cut-off)

Column	What it means	How it's computed
Cut-offs	Approved cut-offs in the range	Count of the employee's approved payslips in the range.
SSS EE / ER / EC	SSS shares	Sum of the SSS deduction (EE) and employer lines (ER, EC).
PhilHealth EE / ER	PhilHealth shares	Sum of the PhilHealth lines.
Pag-IBIG EE / Voluntary / ER	Pag-IBIG shares	Mandatory EE, the voluntary top-up, and ER.
Tax	Withholding tax	Sum of tax lines.
EE Total	Everything the employee paid	SSS EE + PhilHealth EE + Pag-IBIG EE + voluntary.
ER Total	Everything the company paid	SSS ER + SSS EC + PhilHealth ER + Pag-IBIG ER.
SSS MSC (per cut-off row)	Monthly Salary Credit used	The SSS bracket's salary credit on that payslip.

5. Payroll → Government Compliance

5.1 Remittances

Menu: Payroll → Government Compliance → Remittances **View:** Report per month (tabs per agency)

All approved cut-offs ending in the calendar month, per employee, for the company chosen (each company is its own employer; its TIN and agency numbers from Payroll Settings → Employers head the Excel). Cleared = all companies. Download = one Excel workbook (summary + a sheet per agency).

Column	What it means	How it's computed
SSS: Salary Credit	Monthly Salary Credit	The highest SSS MSC on the month's payslips.
SSS: EE / ER / EC / Total	SSS shares to remit	Sums for the month; Total = EE + ER + EC.
PhilHealth: Basic Salary	Base of the premium	The highest PhilHealth base on the month's payslips.
PhilHealth: EE / ER / Total	Premium to remit	Sums for the month; Total = EE + ER.
Pag-IBIG: Compensation	Base of the contribution	The highest Pag-IBIG base on the month's payslips.
Pag-IBIG: EE / Voluntary EE / ER / Total	Contributions to remit	Sums; Total = EE + voluntary + ER.
BIR 1601-C: Compensation	Gross compensation	Sum of gross pay.
BIR 1601-C: Non-taxable	Exempt part	Non-taxable earnings (e.g. de minimis allowances) + mandatory EE contributions.
BIR 1601-C: Taxable	Taxable compensation	Taxable pay − mandatory EE contributions.
BIR 1601-C: Tax Withheld	Tax to remit	Sum of withholding tax.

5.2 Year-end Tax

Menu: Payroll → Government Compliance → Year-end Tax **View:** Report per year (one row per employee); 2316 per employee

Annualization: the whole year's income tax compared with the tax already withheld, from approved payrolls and the approved 13th month of the year. Feeds the alphalist Excel and the printable BIR 2316 data. Filtered by company: only that employer's payslips; a transferred employee gets a 2316 from each company.

Column	What it means	How it's computed
Gross Compensation	Everything the employee earned in the year	All approved payslips' gross pay (basic, overtime, holiday pay, allowances, adjustments) plus the 13th month.
13th Month	The approved 13th-month pay for that year	Taken from the approved 13th-month batch. Shown separately because it gets a special tax exemption.
Contributions	The employee's own share of SSS, PhilHealth and Pag-IBIG for the year	Sum of the employee-share deductions on the payslips. The employer share isn't included. These are deducted from taxable income by law.

Column	What it means	How it's computed
Non-taxable	The part of gross pay the BIR doesn't tax	Gross Compensation − Taxable. It includes non-taxable allowances (Rice, Uniform, Laundry and other types not marked Taxable), the contributions, and the 13th month up to ₱90,000. For a minimum wage earner the whole gross is non-taxable.
Taxable	The income the tax is computed on	Taxable pay − contributions + any 13th month above ₱90,000. It is 0 for a minimum wage earner.
Tax Due	The tax the employee should pay for the whole year	Taxable → the BIR annual table in force on Dec 31 (e.g. ₱1,000,000 → ₱152,500.00).
Withheld	The tax actually deducted during the year	Sum of the withholding tax on every approved payslip.
Difference	What's left to settle	Tax Due − Withheld. Positive: still to collect, usually on the last payroll of the year or the final pay. Negative: over-deducted, so refund it to the employee. 0: settled.

Worked example (figures are illustrative): ₱30,000 a month, ₱2,000 a month rice subsidy, contributions ₱2,450 a month

- Gross: 360,000 basic + 24,000 rice + 30,000 13th month = ₱414,000
- Contributions: 2,450 × 12 = ₱29,400
- Non-taxable: 24,000 rice + 29,400 contributions + 30,000 13th month (under ₱90k) = ₱83,400
- Taxable: 414,000 − 83,400 = ₱330,600
- Tax Due: BIR annual table — 15% of the amount over ₱250,000 = ₱12,090
- Withheld: suppose the payslips deducted ₱11,800
- Difference: +₱290 still to collect (negative if too much was withheld)

6. Payroll → Special Pay

6.1 13th Month Pay — batches

Menu: Payroll → Special Pay → 13th Month Pay **View:** List (one batch per year)

Generate 13th Month: choose the year, pay date (on or before December 24) and All employees or Selected employees. Selected = only those are computed; on an existing Draft the others keep their amounts. Submit sends it to the "13th Month Pay" approval (same approvers as Payroll Run); the last approval releases it. Roll Back Selected / All reopens approved employees (the batch goes back to Draft and through approval again) — only before the pay date (December 24 when none is set); after that it is paid and can't be rolled back or generated again.

Column	What it means	How it's computed
Year	The year the 13th month is for	One batch per year for all companies, or one per company (not counting cancelled ones).
Status	Where the batch is	Draft (can be generated again) → Pending → Approved; Disapproved returns it to Draft; a Draft with no approved employees can be Cancelled. A Draft may still hold employees marked "Approved" (kept through a partial rollback) — they are locked and keep their amounts.
Earned Through	Last approved payroll used	The latest end date of an approved cut-off in the year when the batch was generated. Later cut-offs are projected.
Pay Date	When it is paid	As entered on Generate.
Employees / Total	People and amount in the batch	Number of lines; sum of their 13th month.

6.2 13th Month Pay — batch view

Menu: 13th Month Pay → View **View:** Record view (one row per employee)

Column	What it means	How it's computed
Pay Basis	Monthly or daily paid	From Salary History on December 31.
Basic Earned	Basic salary already earned this year	From approved payslips: Basic Pay + Paid Leave − absences / late / undertime / unpaid leave + salary differentials (retro salary). No overtime, premiums, night differential or allowances (PD 851). Expand the row for the amount per month.
Projected	Basic salary of the cut-offs not yet paid	Monthly-paid: monthly rate ÷ cut-offs in the month, for each cut-off of the year after Earned Through. Daily-paid: not projected (a warning says so).
13th Month	The 13th-month pay	(Basic Earned + Projected) ÷ 12.
Taxable (over ₱90k)	Part that is taxable	13th Month − ₱90,000 when above it; counted in the Year-end Tax.
Check	Warnings	E.g. daily-paid cut-offs not projected — generate again when they are paid.
Approved · R1 / R2 / Added (tags)	Approval round of the line	As on the payroll run: approved lines are locked; Added = waiting for the next round.

Column	What it means	How it's computed
Approval Rounds: Total / Earned Through	What each approval covered	Sum of the round's 13th month, and the last approved payroll it counted (each round keeps its own — employees added later count later payrolls).

Note: Adding employees (only before the pay date): Add Employees on an approved batch (or Generate for that year) lists only employees not in it; the batch keeps its pay date, goes back to Draft, and the final approval releases them as the next round.

6.3 Final Pay

Menu: Payroll → Special Pay → Final Pay **View:** Computation per separated employee (posts nothing)

Column	What it means	How it's computed
Rate	Salary on the last day	Salary History on the last day, and its daily rate.
Paid Through	Last approved payroll	End date of the employee's latest approved cut-off.
Unpaid From	Start of the unpaid period	The day after Paid Through, up to the Last Day.
Salary lines (unpaid days)	Pay for days after the last payroll	The payslip rules (section 3.5) for each part of a cut-off, prorated against the full cut-off.
Pro-rated 13th Month	13th month not yet received	(Year's basic salary from approved payrolls + the unpaid period's) ÷ 12 − 13th month already paid this year.
Unused leave conversion	SIL / VL credits converted to cash	Leave balance days × daily rate. VL beyond 10 days is taxable.
Contributions (this month)	This month's contributions not yet taken	Monthly EE − what the month's approved payslips already deducted.
Loans & Deductions	Outstanding balances	Whole remaining balance of each Active scheduled deduction.
Withholding Tax (year-end) / Tax Refund	Year's tax trued up	Annual tax due (as in Year-end Tax, including this final pay) − tax withheld in the year.
Net Final Pay	What the employee receives	Total earnings − total deductions.

7. Payroll → Records

7.1 Salary History

Menu: Payroll → Records → Salary History **View:** List (current salary) and History

Column	What it means	How it's computed
Pay Basis	Monthly or Daily	From the version in force today.
Basic Rate	Monthly salary or daily rate	From the version in force today.
Effective Since	Start of the current version	Its effective date. Payroll uses the version in force on each date.
Change Type	Why the salary changed	New Hire, Regularization, Merit Increase, Promotion, Salary Adjustment, Correction.
Change (History)	Difference from the previous version	New rate − previous rate (and %); "Monthly → Daily" when the basis changed; "first" for the first version.

Note: A version saved after its effective date whose cut-offs were already paid shows up in Payroll Adjustments → Suggestions.

7.2 Contributions

Menu: Payroll → Records → Contributions **View:** List; Compute preview

Column	What it means	How it's computed
SSS / PhilHealth / Pag-IBIG	How each is computed for the employee	Computed (from the contribution table in force), Fixed (the profile's EE / ER amounts) or Exempt. Pag-IBIG also shows a voluntary top-up.
TIN / Tax	Tax treatment	Computed (BIR table), Fixed (monthly amount) or Exempt; "MWE" = minimum wage earner (no tax).
Compute: Base / Credit	Amount the contribution is computed on	SSS: the salary credit of the bracket the monthly compensation falls in. PhilHealth: the monthly basic salary kept between the table's floor and ceiling. Pag-IBIG: the compensation up to the bracket's maximum.
Compute: Employee / Employer	Monthly EE and ER	SSS: the bracket's EE and ER amounts. PhilHealth: base × EE rate and base × ER rate (5% split 2.5% / 2.5%). Pag-IBIG: base × EE rate and base × ER rate.
Compute: EC	SSS Employees' Compensation	The bracket's EC amount (employer).
Compute: Note	Why a line is what it is	E.g. Exempt, Fixed amounts on the profile, no table in force on the date.

7.3 Allowances

Menu: Payroll → Records → Allowances **View:** List

Column	What it means	How it's computed
Allowance	Allowance type	From Allowance Types (taxable or not, de minimis limit). A needs-description type (Other Allowance) shows "Other Allowance — description"; two different descriptions may run at the same time.
Amount / Basis	How much and how often	Per cut-off, Per week, Per month or Per day worked — see Allowance lines in section 3.5 for how each is paid.
Effective	Dates it applies	Effective from – to (blank = ongoing). A new one of the same type ends the running one the day before.

7.4 Deductions

Menu: Payroll → Records → Deductions **View:** List and details (payments)

Column	What it means	How it's computed
Total	Amount to recover	Total amount of the loan / advance.
Paid	Paid so far	All payments: posted by approved payrolls plus manual (cash) payments.
Per Deduction	Amount taken each time	Amount per cut-off — or per month when once a month (1st / 2nd cut-off); One-time: "whole total" once.
Balance	Still to pay	Total − all payments (payroll and manual), with a progress bar.
Schedule	Which cut-offs take it	Every cut-off, 1st or 2nd cut-off of the month, or One-time; from the start cut-off.
Status	State of the deduction	Active, On Hold (skipped), Fully Paid (balance 0 — automatic), Cancelled.
Deducting	On / off switch	On = Active (payroll takes it); Off = On Hold (skipped, balance kept). Shown only while Active or On Hold; needs deduction-edit.
Payments: Source	Where a payment came from	Payroll (posted when the run is approved; removed only by rolling the payroll back) or Manual (Record Payment; a Manual one tagged to a cut-off counts toward that cut-off's amount).

7.5 Payroll Adjustments

Menu: Payroll → Records → Payroll Adjustments **View:** List, details and Suggestions

Column	What it means	How it's computed
Type	What the adjustment is	Retro Salary, Salary Underpayment (earnings), Salary Overpayment (deduction), Other Adjustment (Holiday Pay (manual) for a holiday the employee's branch doesn't observe, overtime / allowance underpayment, refund of over-deduction, allowance overpayment, others).
Period	Past dates it covers	Period from – to.
Amount	Amount paid or recovered	Typed, or from a suggestion (below).
Cut-off	Payroll that pays it	The cut-off it is added to.
Status	State	Open → Applied (when that payroll is approved) or Cancelled.
Suggestions: Retro Salary	Difference owed for a back-dated salary change	For each cut-off already paid at the old rate: monthly rate difference × the days of each month covered ÷ days in that month; daily rate: daily difference × scheduled work days.

7.6 Bank Accounts

Menu: Payroll → Records → Bank Accounts **View:** List

Column	What it means	How it's computed
Payroll Account	The account used for pay	The version in force today (accounts are kept by effective date).
Bank / Account No. / Account Name	Account details	As saved.
Effective From	When the account starts being used	The bank file uses the account in force on the pay date.

8. Payroll → Setup

8.1 Payroll Settings — Premium Rates

Menu: Payroll → Setup → Payroll Settings **View:** Settings

Current local values (Payroll Settings → Premium Rates):

Day Type	Regular Hours	Overtime Hour	Night Diff. (added)	Paid if Unworked
Ordinary Day	100%	125%	10%	0%
Rest Day	130%	169%	10%	0%
Special Holiday	130%	169%	10%	0%
Special Holiday on Rest Day	150%	195%	10%	0%
Regular Holiday	200%	260%	10%	100%
Regular Holiday on Rest Day	260%	338%	10%	100%
Double Holiday	300%	390%	10%	200%
Double Holiday on Rest Day	390%	507%	10%	200%

Column	What it means	How it's computed
Regular Hours	% of the hourly rate for an hour worked that day	Monthly-paid get the part above 100% as Holiday Premium; daily-paid get the whole %.
Overtime Hour	% of the hourly rate for an overtime hour	Used for overtime beyond the first 8 hours of a day off, and all overtime on a work day.
Night Diff. (added)	% added for a night hour	Night hours × hourly × the hour's rate × this %.
Paid if Unworked	% of the daily rate for an unworked holiday	Daily-paid only (monthly-paid are already paid for it in Basic Pay).
Payroll Accounts: Used as default	Company account the payroll is paid from	The default account (optionally for a date range); "match employee bank" pays each bank's employees from the company account at that bank.

8.2 Contribution Tables, Allowance / Deduction Types, Banks, Leave Types

Menu: Payroll → Setup; Time & Leave → Setup **View:** Lists

Column	What it means	How it's computed
Effective Date / Status (Contribution Tables)	When a table version applies	The version in force on a date is the latest effective date on or before it (SSS 2025, PhilHealth 2024, Pag-IBIG Feb 2024, BIR Semi-monthly / Monthly / Annual 2023 loaded — verify).

Column	What it means	How it's computed
Brackets (Contribution Tables)	Rows of the table	SSS: compensation range → salary credit, EE, ER, EC. PhilHealth: floor, ceiling, EE / ER rates. Pag-IBIG: range, EE / ER rates, maximum base. BIR (three tables — Semi-monthly, Monthly, Annual): range, fixed tax, rate on the excess.
Tax Treatment (Allowance Types)	Taxable, non-taxable or de minimis	De minimis: non-taxable up to its limit per month; the excess is taxable.
Allowances / Deductions / Employees (count)	How many records use it	A type in use can't be deleted — set it inactive.
Category (Deduction Types)	Government loan, company loan, others	Shown on the payslip under Loans & Deductions. Needs description (Deduction and Allowance Types): each record must say what it is for (Specify / Item Bought), shown after the type.
Yearly Credits / Max per Filing (Leave Types)	Leave limits	Default yearly credits (overridden per employee) and the most days one filing may have.
Eligibility (Leave Types)	Who may use the type	Gender, employment types, months of service.

9. My Workspace (employee self-service)

9.1 My Payslips and My Attendance

Menu: User menu → My Payslips; My Workspace → My Attendance **View:** Own records only (account linked to the employee)

Column	What it means	How it's computed
Cut-off / Pay Date	Payroll period and pay date	Approved payslips only.
Gross / Deductions / Net Pay	The payslip totals	As in section 3.5.
My Attendance	Own day-by-day record	The same DTR as Timekeeping (section 3.2) for the signed-in employee.
